

**From the Desk of Editor In Chief
Professor Dr. Aizaz Mand Ahmad**

The current issue of PJKD has only a case report submitted on an interesting occurrence as a complication of kidney biopsy. Timely diagnosis and management is the key to the proper management.

We have also published a supplement with the current issue of PJKD. This is in fact the second supplement on an important issue faced by the pediatricians. Dr Ali Lanewala and colleagues have done a tremendous job in finalizing the guidelines. This will be the first guideline in the subject of nephrology and we would like to congratulate their team effort in this regard. I am sure this will be a stimulus for the adult nephrologists to work on many aspects of Nephrology and put forward guidelines considering the local factors in place.

The Editorial board is seriously considering to switch to a quarterly publication to avoid the extra cost that is incurred with printing. So far, the submissions from different centers all across Pakistan had been excellent. The data provided in different publications is important to further understand the disease patterns and dynamics in our society. We will continue to support the nephrology colleagues to enlighten us with their original works, thoughts, case reports and reviews.
