### Renal DTPA Scan

**Dr. Ahmad Qureshy**  
DG NM&O  
Chief Nuclear Physician  
Email: [aqureshy@yahoo.com](mailto:aqureshy@yahoo.com)

25 years old male presented with back pain and found to have solitary left kidney on ultrasound.

Left kidney is normal sized, with good perfusion, good cortical uptake well-functioning left kidney without any outflow obstruction and prompt clearance into the urinary bladder.

Right kidney is replaced by a photon deficient area (Red Arrow without any perfusion, tracer cortical uptake or excretion - nonfunctioning kidney)

The clearance curves if available would have been more descriptive in terms of uptake and clearance.
